***Reasons For Allowance***

1. The following is an examiner's statement of reasons for allowance: claims 1-2, 13-14 and 20-23 are patentable over the prior art patents and printed publications because of the specific configuration of the optical scanner, which comprises a first adjustment unit provided to rotate the at least one reflecting mirror around the axis along the reflection surface in order to attain uniformity of a scanning speed of the optical scanner, and a second adjustment unit provided to rotate an optical element around the axis along the beam-incidence direction in order to correct an inclination of the scanning line in the sub-scanning direction, at least one of the first and second adjustment units being provided with an electrically driven actuator, wherein the reflection mirror is a half mirror and the detection unit for detecting an error of the scanning speed based on a difference of detection times of the light beam detected by at least three photodetectors disposed on a back surface of the half mirror apart from one another at a given interval. The combined limitations as currently claimed are not taught by the prior art of record alone or in combination.

Claims 3-4, 6-8, 11-12, 15, 17-19 are allowed because they are directly or indirectly dependent from claims 1, 2 and 13 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The terminal disclaimer filed on 10/11/05 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of the U.S. Patent No. 6,864,906, has been reviewed and is accepted. The terminal disclaimer has been recorded.
